AI systems engineer and solutions architect who builds production voice-AI systems, evaluation platforms, data pipelines, and developer tools. Strongest at turning ambiguous workflows into observable, reviewable software.

EXPERIENCE

TechAhead — AI Software Engineer, Hoag Medical Group

Oct 2025 – Present

- Own the delivery platform for a healthcare voice-AI system, managing multi-agent workflows as version-controlled resources with drift detection, schema validation, dry runs, and approval-gated promotion across development, staging, and production.
- Design and harden conversational scheduling workflows and their regression harness; a focused eight-scenario suite passed 80/80 automated runs after routing, slot-selection, and tool-handoff fixes.
- Built a PHI-conscious DuckDB analysis pipeline that reconciles structured outputs with call and tool evidence across 6,600+ calls, surfacing reliability gaps in headline automation metrics.
- Extended a NestJS scheduling bridge with FHIR-based batch operations, combo appointments, retryable validation, and fuzzy location matching; built an AWS S3/Vapi call inspector for incident investigation.

TechAhead — Client Solutions Architect

Apr 2025 – Present

- Translate discovery into pragmatic AI and backend architectures, prototypes, delivery plans, and technical proposals for client teams.

Teaching Solved — Founding Engineer

Aug 2024 – Mar 2025

- Built the initial Next.js, PostgreSQL, and AWS platform for educators to create and share language-learning resources, including retrieval-assisted discovery for culturally relevant content.

InduzBuy — Software Engineer Intern

May 2023 – Aug 2023

- Modernized a PHP commerce platform with Laravel and built a BERT-based classification workflow for previously manual data processing.

ICICI Lombard GIC — Software Engineer

Oct 2019 – Aug 2022

- Decomposed insurance services for independent scaling and built a Neo4j decision engine for premium calculations.

SELECTED PROJECTS

Cloudflare Devkit — Built a Bun/TypeScript toolkit for scaffolding, validating, and deploying Cloudflare services, including Workers, Hono APIs, D1, R2, and reusable GitHub Actions. github.com/adhipk/cloudflare-devkit

Hyperspace — Built an HTML-first workspace that brings coding-agent sessions, live progress, task state, and per-project artifacts into one browser hub.

SKILLS

AI: Voice agents, multi-agent orchestration, LLM evaluations, RAG, observability · **Backend & data:** TypeScript, Bun/Node.js, Python, Java, NestJS, Hono, FHIR, PostgreSQL, SQLite, DuckDB · **Platforms:** Cloudflare Workers, AWS, Docker, GitHub Actions, Terraform, React, Next.js

EDUCATION

M.S. Computer Science, Arizona State University

2022 – 2024

B.Sc. Mechanical Engineering, Minor in Computer Science, PES University

2015 – 2019
